Checking and Editing a Client who was Previously Checked Out

One difficulty you my encounter with SCIA is that once you check someone out of the shelter, they completely disappear from the roster and their information no longer appears under the 'Shelter Ops' reporting tools. This makes it impossible to easily check them back in or edit any of their information after the fact. If, for instance, they really are checked out, but you want to add a missed field for the unit number; you cannot see them in Ops anymore. If you're a new SV coming on shift and want to find their number to call them, you cannot see it.

The good news, there is a simple work around provided you know the client's name, phone, or cot number.

1. Go back to the Shelter Intake Home Page (The one that looks like RC Care)

2. Click 'Existing Client' and search for them. They will reappear. This does not, however, put them back in the system.

3. You will now have to check them back in to edit them. It will take you to the 'New Client' screen and it looks like you have to start all over. Well, you do and you don't. You *will* still have to click through every page, but the info is still there and auto populates, so you are really just hitting next on everything until you get to the confirm page.

4. Once confirmed again, they are checked in and will appear in all dashboards and be editable like any other client - including adding CMIST, SRT or anything else that wasn't done before they left (or were accidentally checked out).

Note 1: If it is a family of five it will pull in all five if you just enter the one person, but it will not check all five back in automatically - only the one you pulled back in. It's easy to fix as they will now be sitting there on the roster attached to the person you put back. You click their names, (There will be an indicator next to their name saying 'Checked Out,') to check them back in. Do this for as many as you need to edit or return. No need to do the 'Existing Client' thing for each one. There is a mass checkout function for whole families, but no mass check in to my knowledge.

Note 2: If you are doing this to add another family member for casework purposes after the fact, once checked in scroll down to 'Household' on their individual page (just click their name to go to it) and click the 'Edit' button bottom right. Now, bottom right again, is the teeny, tiny, easy to miss, 'Add Another' button. It'll stick this person to the family once you hit save even if all you add is a name and no other information. What I mean by that is if they forgot to mention Cousin Joe and they are out of the shelter, but you want the right family size for an RC Care case, you can just add another, put in his name, and save. It doesn't require all of the med questions and such for him. Only the primary.

5. Make whatever changes you need to make via the edit buttons in the bottom right of each field. If they are actually coming back to the shelter, you're done, they're checked in. If you are just fixing something, check them back out again after you add the missed unit number (or whatever) and they'll go back out, your SCIA numbers will match again and you're all set.
